

(Company Profile)

IAG Soft is a private company established in 1989. IAG Soft objective is to sell large number of software in all over the world. Its target is to sell at least one product to every Pakistan Business Entity such as Manufacturer, Trader, Retailer or Commercial agents.

Introduction

IAG Soft is one of the largest software developing Company in Pakistan with its twenty years' experience of developing high quality software products for domestic markets. It is specialized in providing standard software products as well as custom application development services in a wide variety of fields including Manufacturing, Trading, Shipping, and Accounts.

Company Office

The company commenced its business with little resources but with the passage of time it has got a steep growth in terms of profits, intellectual capital and market access. Its head office is at Multan, acquiring a full floor (2700 sq ft) near Jallal Masque, best commercial location in Gulgasht Colony.

Team

The company now has a team of 14 highly professionals full time working IT experts to develop and guarantee state of art products, best quality services and highest level of customer support to its 1000+ clients and users in many cities.

Franchise Partners & Affiliates

To further expand its business swiftly the Company has recently announced a policy to make Franchise Sale and Customer Support Offices and Affiliates all over the country along with its own operated offices. Furthermore there are many Franchise Offices which are in progress and hopefully be finalized in coming weeks.

Services & Expertise

The company has expertise in a wide range of platforms and technologies including Desktop, Client/Server, and DOT NET platform on Windows. Various Management Information Systems and Decision Support Systems developed in these technologies and platforms are currently in production at various places with our customers and users.

Products

Besides providing state of the art IT services, IAG Soft offers a large number of ready to install Software Products in Pakistan with many editions and releases of each of the product for a wide variety of industries, business and institutions.

Important products are as follows:

COMMERCIAL WEIGH BRIDGE SYSTEM

IAG Soft first decided to develop weighting Software because 90% of Manufactures are using weighbridge/Weighing Scales. IAG Soft has now achieved its goal because 80% of weighbridge/Weighing Scale Companies are using IAG weighting software. This Software Automatically receives the weight from indicator through Communication Port (RS232), displays the weight on computer screen, saves and print the weight slip. A list of 50 Indicators and there settings are built in and selectable in this software. The user can easily configure all available indicators. Due to Automatic Reception of weight from the port, weight is recorded accurately. This software also records that the weight is either received automatically from the Port or manually entered by the operator. All the security measures have been taken to ensure the actual weight and its date time. Software also provides daily weight, party wise and vehicle wise weight reports.

CEMENT DISPATCH AND WEIGHBRIDGE SYSTEM

Cement Dispatch and Weighbridge system helps to control leakage of any product i.e. raw material and finished goods (Cements). This software is developed for dispatch office, Gate weighbridge and loading areas. It is network-based system connected to the number of gates and number of weighbridges. Weight is automatically received from indicators. No manual entry is allowed without authentication. System does not allow exiting any excess weight of cement. It is an independent, stand-alone system and its data can be pushed to any other ERP system such as SAP, SCALA etc.

WEIGHT VOLUME CALCULATION SYSTEM OF LIQUIDS

The industries dealing in liquid products have to calculate their Products volumes. There are two methods for calculating volumes.

- By Dip
- By Weight

By using Dip, they have to calibrate their tanks or boozers by using their dimensions .By weight they have to use temperature and specific gravity. This software is used for calculating volume of liquid products through Weight and Dip methods. This software also provides a comparison between Volumes calculated by two methods. This software is specially designed for Oil Refineries, Petroleum Sale Dips and Thermal Power stations etc.

TEXTILE SERVER

A Complete ERP System that controls all the departments inside a textile mill (spinning unit). Starting from Cotton Bail Arrivals (purchase), it keeps record of Bails Stacking position, Issue of Bails and Remaining Stock. It also records Yarn production, packing of yarn, sale of yarn and yarn stocks. This software has more than 100 reports, which gives 100% accurate picture of Factory Process.

TEXTILE WASTE SYSTEM

Textile waste system is an independent module which is based on cotton issue to blow room, Receive of different wastes, Reissue of waste to blow room, waste yield, waste stocks, Sale of waste and more than 50 Reports.
